An illustration of two children, a girl and a boy, sitting on a white rocket with red fins and a red nose cone. The rocket is launching upwards, leaving a trail of orange and yellow flames. The girl is holding a purple book, and the boy is holding a red book. There are three small white arrows pointing upwards from the rocket.

#Q. Let T be a full binary tree with 8 leaves. (A full binary tree has every level full.) Suppose two leaves a and b of T are chosen uniformly and independently at random. The expected value of the distance between a and b in T (i.e., the number of edges in the unique path between a and b) is (rounded off to 2 decimal places) _____.

a and b same leaf node, distance = 0 \Rightarrow 8 Possibilities

a and b as Sibling Nodes, Distance = 2 \Rightarrow 8 Possibilities

a and b Selected with distance = 4 = 16 Possibilities

a and b Selected with distance = 6 = 32 Possibilities

$$\text{Avg distance} = \left(0 \times \frac{8}{64}\right) + \left(2 \times \frac{8}{64}\right) + \left(4 \times \frac{16}{64}\right) + \left(6 \times \frac{32}{64}\right)$$
